

# 6 Things to Look for in a Managed Services Provider

1

## Availability

Look for an MSP that offers 24/7 monitoring and services for your infrastructure needs.

2

## Third-Party Vendor Partnerships

An MSP is only as good as their resources, so look for an MSP that has relationships with top-rated vendors and suppliers.

3

## Ability to Plan Your IT Budget

Assess the provider's ability to work within your budget, keep costs predictable, and cut expenses where possible.

4

## On-site and Remote Support

Comprehensive on-site and remote support ensures you are able to get help when you need it.

5

## Employee Support

A reliable MSP should provide resources for your employees to learn how to best use your technology and how to avoid cyber threats.

6

## Testing, Monitoring, and Maintenance

Cybersecurity should be a primary specialty of your MSP. They should oversee regular updates, tests, and security maintenance.
